

Cattle Decapitation, Colonic Villus Biopsy Perform

Obese pathetic creature

Exaggerated, consuming anatomical features

Years of sloth and unfit diet have created this gastrointestinal nightmare

Biopsy performed

1,000 strains of cancer

Goiters, tumors, rectal decay

Anally emaciate

Dire need for colonics

Advanced restructure now gives way

Pressurized antibacterial spray

Excess remains for a dish to saute

Inept of happiness and incapable of a normal existence

Ever ingesting abscess

Malignant offal-cavern of human cess

Biopsy performed

1,000 brains no answer

Superceding our knowledge of anatomy with the ferocious virulence of pathology

All attempts have failed

We're losing him

Last ditch effort for preservation

The remains are felched or munged and spat out into a jar of formaldehyde

Ever ingesting abscess

7 years of fecal decay--eaten from inside and withered away--cauterized rectum of colonic waste

You are the victim and embarrassingly, you die

Exposed blackened innards of digestion

Closed casket funeral time

Biopsy hypothesis: subject neglected by life

Superceding our knowledge of anatomy with the ferocious virulence of pathology

Ever ingesting abscess

Malignant offal-cavern of human cess

Goiters, tumors, rectal decay

Anally emaciate

Culinary...

Scatology...

Disease....

On feces, I feed

Dire need for colonics

Advanced restructure now gives way and emptied into the hands of a physician

A gastrointestinal plague survives
